

electric power by appearance being good good.

[0050] Moreover, since the length of a conductor pattern can bring near and form in the upper limb of a windshield substantially the antenna which is quadrant wavelength according to this invention, driver's seat front visibility is securable.

[0051] Moreover, according to this invention, since the length of a conductor pattern can shorten the length of a longitudinal direction and can form the antenna of quadrant wavelength substantially, the front visibility from a driver's seat is securable.

[0052] Moreover, according to this invention, a part of conductor pattern [ at least ] of an antenna can be bent, the length of a longitudinal direction can be shortened, and the miniaturization of an antenna and driver's seat front visibility reservation can be aimed at.

[0053] moreover -- according to this invention -- two or more lines as a two-dimensional configuration -- since a pattern is included, the length of a longitudinal direction can be shortened and the miniaturization of an antenna and driver's seat front visibility reservation can be aimed at

[0054] Moreover, according to this invention, in the two-dimensional configuration containing a clinch, the length of the longitudinal direction of a conductor pattern can be shortened and the miniaturization of an antenna and driver's seat front visibility reservation can be aimed at.

[0055] Moreover, according to this invention, since a frame type configuration is included in a two-dimensional configuration, the length of a longitudinal direction can be shortened and the miniaturization of an antenna and driver's seat front visibility reservation can be aimed at.

[0056] Moreover, since according to this invention the side close to \*\*\*\* of a windshield does not form the straight line even if it sticks a bright film along with the curved surface of a windshield, it cannot be conspicuous and the grade of a gap can be carried out.

[0057] Moreover, according to this invention, since it is the concave configuration which approaches \*\*\*\* of a windshield most near the both ends, it cannot be conspicuous and the side of the bright film close to \*\*\*\* of a windshield can be carried out, even if it leans to \*\*\*\* of a windshield.
